// PROFILE

Frontend developer specialising in React and TypeScript, with experience building reusable interfaces, shared component libraries and API-driven applications. Delivers features from design through production. Working knowledge of Vue and Laravel through an internal CMS, plus additional backend exposure through Ruby on Rails and Node.js. Currently extending this foundation into agentic AI, building a personal project with an AI-agent layer on top of a React/TypeScript frontend.

// EXPERIENCE

Web Developer · TravPro Mobile Jan 2024 – Present · Netherlands

- Built reusable UI components in React, TypeScript and SCSS, translating product requirements into responsive, cross-device interfaces.
- Led the migration to a shared, template-driven platform and component library, enabling new client applications to reuse core UI.
- Replaced the Webpack build pipeline with Vite, improving build speed and developer experience.
- Owned the rewards module from initial design through production release.
- Contribute to the internal CMS (Laravel and Vue), including migrating parts of the feature-flag interface from Blade to Vue.
- Integrated REST APIs with error handling and real-time updates; maintained backward compatibility during the platform migration.

Web Developer · Firmhouse BV Apr 2022 – Oct 2023 · Netherlands

- Built React interfaces and contributed to Ruby on Rails features for subscription management applications serving international clients.
- Translated Figma designs into responsive interfaces, collaborating with designers to maintain consistency with the design system.

Full-Stack Engineer Intern · Integrify Aug 2021 – Mar 2022 · Remote

- Developed features using React and Node.js while collaborating remotely with an international team.

// SELECTED PROJECT

Founder and Developer · Safe to Say No 2024 – Present · safetosayno.com

- Built a Next.js website with Sanity CMS (content schemas, GROQ queries) and a custom email subscription flow, deployed on Vercel.
